PROFESSIONAL SUMMARY

Results-driven React Native Developer with **3 years of experience** designing, building, and shipping cross-platform mobile applications for Android and iOS using React Native, JavaScript (ES6+), TypeScript, and Redux Toolkit. Proven track record delivering production features to **100K+ users**, driving **~50% faster feature delivery** through reusable component architecture, cutting production defects by **35%** through rigorous Jest testing, and managing **7+ production releases** across the App Store and Google Play Store. Beyond professional work, independently architected and shipped a full-stack side project, pairing a React Native frontend with a FastAPI/PostgreSQL backend, covering REST API integration, secure authentication, network-aware UX, and performance profiling.

TECHNICAL SKILLS

Mobile Development: React Native, Android, iOS, Native Modules, Deep Linking, Push Notifications, AsyncStorage / Offline Storage

Languages: JavaScript (ES6+), TypeScript, Python, SQL

State Management: Redux Toolkit (TypeScript store architecture), RTK Query, Context API

Backend: FastAPI, SQLAlchemy, Alembic, PostgreSQL, REST APIs, JWT Authentication, Email OTP

Build, Tools & CI/CD: Android Studio, Xcode, Gradle, Git, GitHub Releases, Vercel CI/CD, Firebase, Flipper, Google Analytics

Practices: Component-driven Development, Performance Optimization, Code Reviews, Mobile Debugging, Application Profiling, Release Management, Agile

PROFESSIONAL EXPERIENCE

Tata Consultancy Services

Bangalore, India

Systems Engineer / React Native Developer

June 2023 - Present

Technologies: React Native, JavaScript, TypeScript, Redux Toolkit, RTK Query, REST APIs, Jest, Firebase, Android Studio, Xcode, Gradle, Git, Agile

- Developed and delivered cross-platform mobile application features for the NEST Pension app using React Native, JavaScript (ES6+), Redux Toolkit, RTK Query, and REST APIs, serving **100K+ Android and iOS users**.
- Designed and implemented reusable, component-driven React Native architecture and shared UI components, enabling scalable feature development, pixel-perfect UI implementation, and **~50% faster feature delivery**.
- Built TypeScript-based Redux Toolkit store slices for type-safe global state management, while developing screens and reusable UI components in JavaScript.
- Integrated RESTful APIs using RTK Query with request caching, asynchronous data fetching, authentication flows, lifecycle management, and robust error handling to improve application responsiveness.
- Integrated **Firebase Cloud Messaging** for broadcast-based push notifications (rather than topic/group-segmented messaging) and used AsyncStorage for local data persistence and session handling.
- Optimized React Native application performance by reducing unnecessary re-renders, debugging Android and iOS native issues, profiling application performance, and resolving production bottlenecks.
- Developed automated unit tests using Jest to improve code quality, **reduce production defects by 35%**, and increase confidence across continuous feature releases.
- Managed **7+ production releases** across Google Play Store and Apple App Store using Gradle, Xcode, and release management best practices while ensuring platform compliance and application stability.
- Collaborated with product managers, designers, QA engineers, and backend developers throughout Agile sprints, and mentored junior developers through architecture discussions, pull request reviews, and React Native best practices.

PROJECTS

NEST Pensions App

React Native • TypeScript • React Navigation • JavaScript (ES6+) • Redux Toolkit • RTK Query • Firebase • Jest

- Delivered scalable cross-platform features for the official NEST Pension application used by **100K+ users**, with a consistent experience across Android and iOS.
- Built typed Redux store slices in TypeScript and reusable UI/screens in JavaScript; integrated secure REST APIs via RTK Query with caching, authentication flows, and error handling.
- Implemented Firebase-based push notifications and AsyncStorage local persistence; contributed to **7+ App Store/Play Store releases** backed by Jest unit testing.
- Partnered closely with UX designers and QA engineers to translate Figma designs into pixel-perfect, consistent UI across Android and iOS, and to triage and resolve reported issues each sprint.
- Took ownership of specific feature modules end-to-end, from technical design through implementation, code review, and release, as part of a fast-moving Agile team shipping to **100K+ production users**.
- Presented technical progress and demoed completed features during sprint reviews, keeping engineering delivery aligned with product and stakeholder expectations.

NotesApp – Full-Stack Cross-Platform Mobile Application | [View Latest Release](#)

React Native • JavaScript • TypeScript • FastAPI • PostgreSQL • SQLAlchemy • Alembic • JWT • AsyncStorage • Render • Neon PostgreSQL

- Architected and developed a **full-stack, production-grade** cross-platform Notes application from scratch, pairing a React Native mobile frontend with a **FastAPI + PostgreSQL backend**, following scalable client-server architecture principles.
- Used TypeScript to build a typed Redux store and SVG icons as native React Native components (rendered locally instead of fetched from public URLs), while developing screens and reusable UI in JavaScript.
- Implemented secure authentication (JWT, Google Sign-In, email OTP, refresh tokens, react-native-keychain) with AsyncStorage-based persistent login sessions across app restarts.
- Built real-time network-connectivity detection, surfacing a dedicated "No Internet Connection" state so users always have clear, reliable feedback on app connectivity.
- Designed and built a **scalable RESTful backend** using FastAPI, SQLAlchemy, and Alembic, implementing layered architecture, middleware, request validation, and versioned database migrations.
- Designed a **normalized PostgreSQL relational schema** supporting user management, authentication, and note data models built for scale.
- Implemented version-check and force-update workflows; deployed the backend on Render with Neon PostgreSQL, using GitHub-based release management and **semantic versioning (v1.0.0)**.
- Scoped AI-enhanced features (e.g., smart note suggestions and personalization) as part of the product roadmap for upcoming releases.

SensibleT – Freelance Mobile Application

React Native • Secure Token Storage • OTP Authentication • Chatbot Module

- Independently developed a feature-rich cross-platform mobile app from scratch for a client, owning requirements gathering, development, testing, and APK deployment end-to-end.
- Built persistent login with secure token storage and OTP-based authentication for onboarding, plus an interactive, option- and query-driven chatbot module that guided users through goal-based investing and investment-related queries with task-specific, topic-aware responses.
- Developed an animated article feed and content display with smooth transitions, optimized navigation, and responsive layouts; collaborated directly with the client on UX/design improvements for a polished user experience.

Calculator – Cross-Platform Mobile Application | [View Repository](#)

React Native • TypeScript • Context API • Custom Theme System

- Developed a React Native calculator app using TypeScript, implementing operator precedence, chained calculations, and state-machine-based input handling.
- Designed reusable UI components and a centralized Context API theming system supporting dynamic light and dark themes.
- Applied React Hooks and component composition to build a scalable, maintainable architecture while optimizing rendering performance.

Personal Portfolio Website | harshaapoorv.com

React • Tailwind CSS • Vercel • CI/CD

- Designed and built a responsive personal portfolio website using **React and Tailwind CSS**, and deployed it on Vercel with an automated **CI/CD pipeline** so every push to the repository is automatically built and published to the live production site.

Cyberbullying Detection – Machine Learning (Academic Project) | [Project Report](#)

Python • Machine Learning • Natural Language Processing

- Built a machine learning model to classify text as cyberbullying or non-cyberbullying content, applying NLP-based text preprocessing and feature extraction with classification algorithms as part of an academic project.

EDUCATION

SRKR Engineering College

Bhimavaram, India

Bachelor of Technology, Computer Science & Engineering, GPA: 8.13/10

2019 – 2023

CERTIFICATIONS

- Python for Everybody – University of Michigan
- Applied Data Science I – WorldQuant University
- Elements of AI – University of Helsinki

ACHIEVEMENTS

- HackerRank 5★ Gold Badge in Python
- Top 500 – Newton Coding Competition
- WorldQuant Honors Badge
